Invitation of APLAC Pesticide Residues in Rice Proficiency Testing Program T056

This is an **INVITATION** to testing laboratories to participate in the APLAC Pesticide Residues in Rice Proficiency Testing Program---APLAC T056 coordinating by CNAS involving quantitative testing of the total content of Fenvalerate isomers (C₂₅H₂₂ClNO₃, CAS No 51630-58-1) in rice powder samples. The structure of Fenvalerate was listed below.

Three rice samples packaged in plastic bags will be supplied to each participating laboratory.

Routine methods should be preferably used, however, the limit of detection should be better than 0.01mg/kg. Participants will be requested to specify details of their testing methodology to assist in the interpretation of results. No reference materials will be supplied.

CNAS will coordinate the program in collaboration with the Technical Centre of Liaoning Entry-Exit Inspection & Quarantine Bureau (LNCIQ). It is proposed that this accredited proficiency testing provider, LNCIQ, will dispatch samples directly to the participating laboratories in Nov/Dec, 2007.

Each accreditation body of APLAC members is invited to nominate up to a maximum of 4 laboratories from your economy to participate in this program. Each of others is invited to nominate up to a maximum of 2 laboratories to participate. Note that preference will be given to laboratories that are accredited for the proposed tests.

This program involved rice and pesticide residues, there may be some problems on the customs clearance in some countries. We ask accreditation bodies to communicate with local customs officials as soon as possible and inform us if any necessary work we should do.

Please return details of your nominated laboratories using the attached FAX REPLY FORM no later than Oct 10, 2007.

I look forward to receiving your reply and I will send you further details of this program in the near future.

Yours sincerely

Cao Zhijun
CNAS
