

A Multidisciplinary Approach to Assuring the Quality and Safety of Drinking Water,
November 3 & 4, 2003, Canmore, Alberta, Canada.

Walkerton, boil water orders, and water-related disease outbreaks have put water quality and safety at the top of the agenda for the public, health officials, water quality professionals and governments at all levels. This workshop will bring together representatives of governments, NGOs and professional organizations to discuss and put forward recommendations on:

1. Improving cooperation, collaboration and communication among governments and professional organizations and with the public.
2. The roles different professions play in assuring drinking water quality, what problems they face and what can be done to improve their ability to help assure the public of the quality and safety of water supplies.
